The master's thesis refers to the vine varieties common in Georgia, according to the economic history of Ivane Javakhishvili. Ivane Javakhishvili devoted the fifth volume of the twelve volumes to the vine varieties.

Based on data sorting and analysis, each variety was entered into the excel database. Where they are characterized by location, name, and ampelographic features. In this work, the vine varieties described by Ivane Javakhishvili have become a visualization.

Using the program ArcGIS and illustrator, the features of the spatial distribution of vines, their spatial data were determined. The obtained results are presented in the form of maps and diagrams.
